**LTIMindtree**

No Cost Pre-assessment for Legacy ETL Migration to AWS Cloud

LTIMindtree will perform an analysis of the current landscape of systems involving a variety of technologies and provide free pre-assessment of the migration process, the target state, savings in terms of Total cost of ownership, and other intangibles such as scalability, flexibility, and maintenance.

Outcomes

- Current state and target state architecture
- Business case addressing your unique requirements
- Total cost of ownership (TCO)
- Proof of concept using customer workloads
- Migration process

Why LTIMindtree

- Experience with many legacy ETL tools

- Automation of migration for faster time to market

- Innovative engagement models

- Achieve **>50%** migration using purpose-built accelerators

- Phased migration, parallel run, and cutover for minimal disruption to business processes

- Minimize business disruption due to downtime

- Advanced Consulting Partner in the AWS Partner Network (APN)

- Migration expertise across many industry verticals and AWS cloud expertise in modernization using its Scarlet accelerators

Solution Details

Connect to legacy ETL tools using native credentials	Migration of ETL workloads to AWS Glue Spark	Export workloads to a text file	Point and click user interface

Migrated workload validation using scale-out test data	Conversion percentage and editor for remediation of the target program	Transparency in migration process from discovery to testing. Seamless deployment to the target AWS account

PoV Pre-Requisites

Current on-prem system statistics	Business and technical stakeholder engagement	Current workload details on processes and technologies involved

Key Performance Indicators

Performance   Scalability   Reusability   Security   TCO

Industrializing legacy ETL migration with LTIMindtree's Scarlet ETL Migrator
